

DATA MINING 2022-2023 FALL

PROJECT TOPIC PROPOSAL

Student #1	Number: 150220759 Name: Oğuz Kağan Pürçek
Student #2	Number: 150220751 Name: Emirberk Almacı
Project Title	Player Suggestion System
Summary of the project topic and goal	The primary goal of this project is to create a player recommendation model for football teams and individuals participating in football games. To achieve this, a comprehensive dataset will be leveraged, encompassing a wide array of factors including general player attributes and historical performance records. Subsequently, a variety of machine learning models will be meticulously trained using this data. In addition, the model will offer a robust solution for optimizing player selection strategies and enhancing the overall gaming experience.
